

Iofina Chemical is an importer of TFM (3-trifluoromethyl-4-nitrophenol) and formulates products from this key raw material. We support the proposed legislation HR4845.

- There is no US manufacturer of TFM.
- Markets served are key to USA economy.
- This raw material goes to make products where downstream users and their consumers benefit from the proposed suspension.
- This proposed duty suspension is available for all importers.
- Duty suspension will support job/ R&D growth and downstream users.

Thomas Becker

President/CEO Iofina Chemical Inc.
